

GeoNetwork

open source

The screenshot displays the GeoNetwork web application interface, which is a complex web-based GIS platform. The interface is organized into several main sections:

- Navigation and Search:** At the top, there are search bars for "GeoNetwork catalogue" and "GeoNetwork" itself, along with navigation icons for home, search, map, contribute, and admin console.
- Left Sidebar:** Contains a "TYPE OF RESOURCE" filter, a "ZONES" list, and a "RECENT" list of items.
- Main Content Area:** The central part of the screen is dominated by a map. The map is titled "Orthophotos 2012-2013" and shows a street-level view of a city. Overlaid on the map are various data layers, including a 3D terrain model and a color-coded elevation or risk map. A "Gérer les couches" (Manage layers) panel is visible on the right side of the map, listing various data sources and their properties.
- Right Sidebar:** A vertical column of utility icons for "Metadata and templates", "Import/Export", "Harvesting", "Statistics and status", "Reports", "Classification systems", "Standards", "Users and groups", and "Settings".
- Bottom Panel:** A "Download and links" section with buttons for "Open link" and "Download". Below this is an "Associated resources" section listing related services and a "About this resource" section with a "Comptes" (Accounts) link.

3.4.x

3.4.3 released in July

3.4.4+ will only contains bug fixes

3.6.x

[Improved accessibility \(ie. layout, color contrast, alt text, aria labels, ...\)](#)

[Performance improvements and better browser cache](#)

[Improve INSPIRE support: Anchor](#)

Map improvements: legend panel, [projection switcher](#)
